

Join ResearchMatch to enhance recruitment in your research!

What is ResearchMatch?

ResearchMatch.org is an online recruitment platform that connects researchers with volunteers who are interested in learning about health-related study opportunities.

How does ResearchMatch work?

Researchers register with ResearchMatch and search the de-identified database for potential participants that match their study's eligibility criteria. If a match is found, researchers can send their contact message with details about the study through ResearchMatch to volunteers.

Joining ResearchMatch as a researcher allows you to view aggregate registry data of volunteers that meet your study's criteria (*feasibility access*).

To gain *recruitment access* to contact volunteers, you need the following:

- IRB approval of ResearchMatch as a recruitment tool
- A health-related IRB-approved study (or exemption)
- An IRB-approved contact message

How will ResearchMatch help me?

ResearchMatch:

- Is a free, low-burden recruitment tool
- Helps streamline your recruitment process
- Connects you with potential study participants
- Allows you to track responses from interested volunteers

How do I join ResearchMatch?

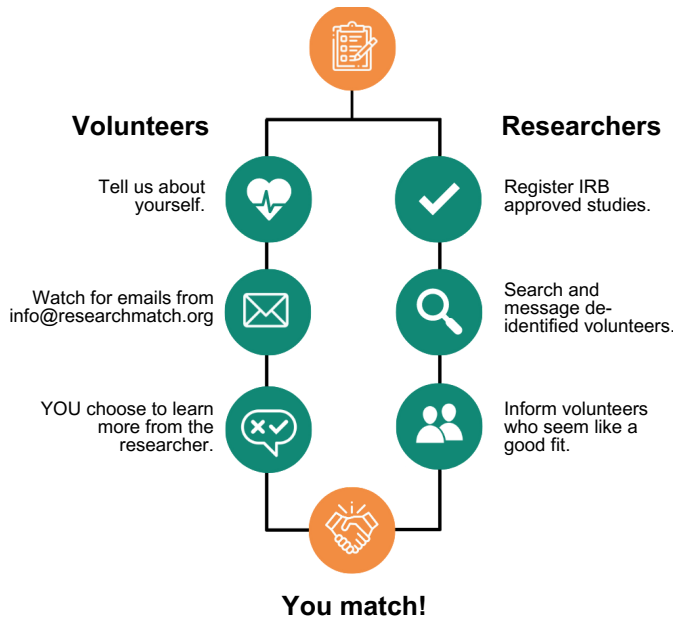

Visit **ResearchMatch.org** or scan the QR code to register as a researcher. You do not need IRB approval to join!

"For a recent study I struggled with time efficient ways to recruit participants with very specific health and home criteria. I decided to use ResearchMatch – it worked perfectly. We easily recruited our needed participants over a very short enrollment period."

— Ohio State University Researcher
